If you would know the Interest of one Hundred Pounds for one Month,  
two Months, three Months, six Months, nine Months, or one Year,  
look for 100. in the Side; and in the next Column, under 1 Month  
is 8s. 4d.; for 2 Months 16s. 8d.; for 3 Months 21. 5s.; for 6 Months  
42. 10s.; for 9 Months 63. 15s.; and for a Year 81.; and so of the rest.

This is the honest Way by which Men should  
To Interest let their Silver and their Gold;  
Yet worldly Misers, when to Raking fall,  
They with their Interest get the Devils and all.

## THE INTRODUCTION TO THE COURTEOUS READER.

**T**HE learned Cardan tells us, in the Beginning of his Aphorisms, that *Vita brevis, Ars longa*. Life is short, Art long, Experience not easily obtained, Judgement difficult, and therefore it is necessary that a Student exercise himself in considering several Figures, but also that he diligently read the Writings of others, who have treated rationally of this Science, and make it his Business to find out the true natural Causes of Things by Experiments, to know the certain Places and Proessions of the Planets, Fixed Stars, and Constellations, but above all to be a passionate Lover of Truth. For, *Pauci intelligent, multi reprehendunt*.

Astrology is no such contemptible Story as many Persons, ignorant of the very Fundamentals and first Rudiments thereof, are too bold to affirm; and an Astrologer is so far only true and honest as he depends in his Conjectures on Principles of Natural Philosophy; and since those Arts, which are inherent in their proper Subjects, cannot promise absolute Certainty concerning Matters to come, the Astrologer ought (saith the learned Cardan) never to pronounce any Thing absolutely or peremptorily concerning future Contingencies. The Reason is, lest he bring himself and the Art under Censure and Condemnation, in case he take not his Measures aright, and the Event answer not his Prediction or Prognostication; but, on the other Side, let it be considered (as one well notes), is not an Error in the Astrologer as tolerable as in the Divine, Physician, or Lawyer, or in Men of any other Profession? Is the Divine's Judgement always Gospel? Does the Physician always cure? Is the Lawyer's Opinion ever infallible? Does the Logician still prove, or the Rhetorician always persuade? So long as we are Men, we must be subject to Infirmities, Oversight, and Errors. *Humanum est errare*; and farther it is the Pleasure of God sometimes to frustrate the Portents of Heaven for the Sins of the People, who otherwise might partake of their natural Sweetness and Bignity: yet it cannot well be denied, but that *Mundus superior unitus est inferiori*, and that the Cœlestial Constellations do pour forth their Influences, and operate upon these inferior Bodies. This being premised, I shall proceed (by the Assistance of Almighty God)\* to the Consideration of the State of the ensuing Year 1779, and deduce my Judgement from rational and experimental Grounds of Arts, it will be shewn in the following Pages to the End of my Book

To the BUYERS Yearly of ALMANACKS and  
PROGNOSTICATIONS.

Prefatio, five Admonitio pia et utilis.

**T**HOU, whose short Span of Life, as plain appears,  
Hangs but up on the Walle of some few Years;  
Which that Arithmatician, best of Men,  
Call up in his Account Threescore and Ten  
How soon they will determine, dig thy Grave,  
Thou mayst observe, thou seest what Wings they have,  
How with no Sound they wheel their Time about,  
Eating, with Silence, Lives and Leases out.

*Invigilate viri, tacito nam tempora gressu  
Diffugiunt, nulloque sono convertitur annus.*

As here's a Date but Yesterday renew'd  
Not long since, yet doth a Year conclude;  
In which the Diary of little Cost  
Is soon run out, and that small Value lost,  
Wherewith 'twas purchased, it thou not extend  
Thy Thoughts, to make it thus far forth thy Friend:  
That every Year thy Almanack thou buyest,  
Thou'rt one Year nearer to the Year thou dyest;  
And from that Meditation so prepare  
Thyself, that Death not seize thee unaware.  
One Year thus to another yielding room,  
Hath fill'd many a Sepulchre and Tomb;  
Fretted our Bricks with Age, Marble with Rust,  
Converted Generations into Dust  
From which collect though ne'er so young thou be,  
This may be Domesday's final Year with thee:  
And from that Motive such a Method borrow,  
As thou shouldst live an Age, or die To-morrow.

*Ultima semper expectanda dies,*

# JANUARY hath XXXI Days.

All hail, my Masters! Let Heaven's milder Gales  
Not toss me to and fro, but fill my Sails.  
Jove arm my Pen, arm it with Art and Truth,  
Not gaudy Shams by some fain'd Bards set forth.  
Assist, ye Heavens! you mighty Fates infuse  
Zeal in my Heart, that so my Hands may chuse.

The common Vogue is Peace, to that Intent  
Men, great and wise, on Embassies are sent:  
'Tis Jove's soft Rays that sets these Things on Foot,  
He makes all willing, shews you Ways to do't.  
Let it be Peace, and let it hold, say I;  
Yet know the great Conjunction's very nigh.

# MARCH hath XXXI Days.

Poor Jove in Virgo, retrograde doth run  
To meet bright Sol in Opposition.  
The Sun to Jove's a Friend, if that he be  
So just, as to keep his Hands and Conscience free ;  
But those once stain'd, the Sun begins to lower,  
And for Misdeeds withdraws his vital Power.

Mischiefs and Murders still record their Fame,  
 That talk Repentance, but repeat the same.  
 As if brute Man, to please his savage will,  
 Had got a Patent to destroy and kill.  
 That's the Effect, to those base Ways they're led,  
 Whose Soul with Rage and Fury's surfeited.

What Good to Mortals, if they know their Fate,  
When they want Power and Skill to conquer that ?  
We please ourselves (the more unhappy we)  
And think we rule all Fate and Destiny.  
Our false Guide, Reason, 's often lost and gone,  
Which shews our swaying Inclinations strong.

We plainly see it then, and own it too.

**T**HE brightest of the Seven Stars is of the third Magnitude, and hath 61 Degrees of Meridian Altitude, and in Colour participates of the ♂ and ♀

The fixed Stars all rise, south, and set about four Minutes sooner every Night than they did the Night before; this considered, the exact Time of the Rising Southing, and Setting for any intermediate Night, not herein noted, may be very easily deduced from these Tables, by Inspection only.

To know the Time of the Rising, Southing, and Setting of any Star in this Table, for any Day required, it is but considering how many Hours and Minutes that Star rises, souths, or sets, either before or after the Seven Stars on that Day, and you will have your Desire; observing that in this Table, a stands for *after* and b for *before*.

Of the ECLIPSES of the two great Luminaries for  
the Year 1779.

**W**ITHIN the Circumference of this Year there will be five Eclipses of the Luminaries, three of the Sun, and two of the Moon, and they will happen in the following Order, as they were calculated by my Astronomical Friend, Mr. Henry Andrews, Teacher of the Mathematics, at Roylton, in Herts.

The first is a solar Eclipse, and happens on Sunday the 16th of May, at 6 Min. past One o'Clock in the Morning, therefore invisible to us.

The second is a total Eclipse of the Moon, and is visible (in Part) to us in Great-Britain; it falls on Trinity Sunday, the 30th Day of May; it will begin (under the Meridian of London) at 2 Min. past Three o'Clock in the Morning; and the Moon sets about 7 Min. before Four, with near three Parts of her Disk, shaded to the Right-hand: The Moon will be less or more eclipsed at Setting, according as Places are situated, either to the East or West of the Meridian of London; for the total Darkness will begin, with respect to the said Meridian, at 13 min. after four o'Clock, solar Time.

Moon

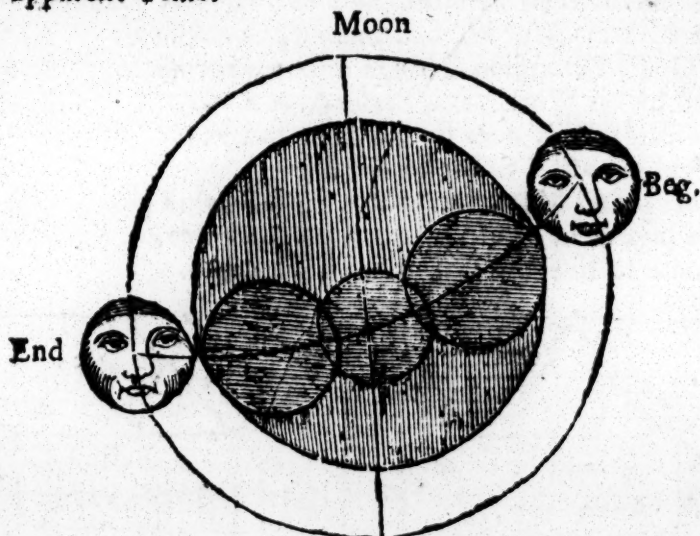

Sun

The third is a small visible Eclipse of the Sun, (if Clouds interpose not) on Monday the 14th of June: The Moon will make the first Impression on the solar Disk, a little to the West of the Sun's Vertex, at 10 Min. past Seven o'Clock in the Morning; the Middle will be at Eight, and the Eclipse will be quite over at 17 Min. before Nine at London, solar Time. The Sun will be shaded 3 Digits, or more, on his upper Limb, a little to the East, as appears by the Type, which is adapted to London, and will very well serve the whole Kingdom.

The fourth is a Total Eclipse of the Moon, nearly central, consequently very large, and of long continuance; this

Eclipse, if the Air proves favourable, may be seen by us in this Kingdom, and not by us only, but also by the Inhabitants of all the States and Kingdoms in Asia, Africa, and Europe; for at the Time of the Middle of the Eclipse, the Moon is vertical to the Eastern Coast of the Deserts of Arabia, which lies  $60\frac{1}{2}$  Deg. East of London, and in  $23\frac{3}{4}$  Deg. North Lat. whence it appears that this Eclipse will be visible to the Western Parts of New Holland, to all the Isles of Lunda, Borneo, Mōlucca, and Philipiana; those of Japan, together with Greenland, Iceland, &c. But the Moon rises eclipsed in New Britain, Newfoundland, Cape Breton, and New Scotland in America. This Eclipse happens in the 2d Deg. of Gemini, on Tuesday the 23d of November; with us, in Great-Britain, it may be expected nearly to correspond with the following Type and Calculation, which is adapted to the Meridian of London, according to solar or apparent Time.

# MOORE, 1779.

The fifth and last Eclipse is a Solar one, upon Tuesday the 7th. of December, at half past Ten at Night, consequently invisible to us, and not to us only, but to all Europe. At the true Conjunction of the Moon and Sun the Moon has about 74 Min. of South Latitude, therefore the Defect cannot be much any where.

'Tis God directs the Motions of the Stars,  
And at his Will he points out Peace or Wars;  
'Tis God sets Bounds to Fate, prescribes a Law,  
Unto which, all his Creatures stand in awe;  
'Tis He curbs lofty Princes; makes them know,  
His Hand above, it is, governs below.  
'Tis He that makes them subject to his Will,  
And whom he please, hath Wisdom, Art, and Skill,  
To trace the endless Motion of each Star,  
And tell how swift they travel, and how far:  
Can mount their Spheres, and see their airy Dances,  
Behold their Aspects, and their secret Glances.  
By God's Permission Things to come peruse,  
Who by his Work, as a Perspective shews,  
His secret Will does by the same infuse.  
A sublime astral Spirit to foreshow.  
Those grand Mutations which do fall below;  
The ingenious Soul, that is from Envy free,  
I invite to live and feast himself with me.

To speak of these Lunar Eclipses whose Figures are delineated above of both in their Order: Now, the first of them is celebrated in a Sign of the fiery Triplicity, and

Vesportine; the ♃ accompanied with cor. ♄, a fixed Star of great Influence, from whence it may be rationally concluded, that the great Actions of Europe intended from hence, will be executed or managed by jovial Persons, viz. Persons dignified with ecclesiastical Titles, as the Pope, Cardinals, Abbots, Priors, Archbishops, Civilians, Doctors of Laws, both Civil and Canon, Chancellors, Judges, Lawyers, Ambassadors, Commissioners, Men of great Authority and Magnificence, grave and sober Persons; the Matters seem to concern Laws, Customs, Privileges, Articles, Treaties, Leagues, &c. wherein there are like to be great Changes, Alterations, or Mutations; as also many Controversies betwixt Neighbouring Princes, and Common Wealths, or free Cities. But the two grand fixed Stars conjoined near the Place defective, and opposite Point thereof, do denounce very fierce Wars or Controversies, concerning those Occasions and Causes prementioned: For generally after an Eclipse or Male-configuration of the Planets in the fiery Trigon, it has been observed, that Wars have succeeded, Slaughter of Men, Rapines, Murders, Towns, Castles, Ports besieged, Depopulations sometimes of whole Countries, Villages, and Provinces, and these are signified to be more violent, if an Eclipse happen in a Time of War. If such a Defect happen in a peaceable Time, it incites many dangerous Contentions, many tedious Law Suits, much variance among vulgar Persons, even concerning trivial Grounds; sometimes Tumults happen, Insurrections in several Counties, or Countries, against their Magistrates, when sometimes Cause is given; sometimes a general Dislike against the Ministers, and whole Tribe thereof. To put forwards many of these Actions, the Eclipse is in the Asterism of ♄, furnished with many martial fixed Stars, all which may add to our proceeding Judgments, besides it being on the Cusp of the 7th, thereby signifies Wars and Debates concerning the Testaments of deceased Persons, &c. It is known unto all, though but meanly versed in Astrology, that ♄ who is Lord of the Place defective, governeth Persia, Hungaria, and Spain, of Cities Babylon, Collogn, whether they may arise in Persia or Hungaria any Wars or Hostility upon the Influence of this Eclipse, 'ere it determine, or any Breach of Leagues, or former Alliances, Time will discover.

Under the third Quadrangle, where the Effects will be most apparent, we do assign ♄ and ♃. under ♄ is Brabant, Flanders, Lombardy. Cities under ♄ are London,

Lorain, Bruges, Norimberg, Mentz. Under *Sagitary*, of Kingdoms, Spain and Hungaria. Countries, Moravia, Dalmatia, Sclavonia, some Parts of the low Countries, Cities, Toledo, Narbon, Stargard, Buda in Hungaria. In many of these Kingdoms, Countries, or Cities, according to the Capacity of their present Condition, the Effects before-mentioned in one kind or other, will manifest themselves more or less, &c. and so much for this Eclipse.

The other follows, now the Moon suffers in the 2d Deg. of II, which my Author says threatens Incurfions and Rapines of Enemies, and hath much malignant Influence on the Inceptions and Renovation of Things. Leagues and Contracts, under this Influence will not last long, and with less Faith be observed. *Alubater* tells us *Destructionem virorum significat*, that it denotes the Destruction of Mankind, &c. which in brief bespeaks Strifes, Dissentions, and Seditions amongst all People, from the Clergy to the Merchant, and Mechanics of every Order or Quality amongst them, deadly hatred, private Quarrels, secret Councils, underhand Dealing, to supplant one another; contempt of Laws, neglect of Piety and holy Duties, scarcity of Food, violent and fierce Sickneses, pestilent Distempers in many Places; some are yet to taste of that Cup that all this while have thought themselves secure, with slighting and contempt of others in Affliction; high stormy Winds very prejudicial to Mankind, overturning Houses, and turning up Trees by the Roots; but must desist, having other Things to treat of in my Book; or I shall give you one of the Prophecies of the famous *Nostradamus*, which is fulfilling in these Days, is the 54th in the 3d Century; it is thus in the French Language;

L'un des plus grands fuira aux Espagnes,  
Qu'en longue playe apres viendra seigner,  
Passant Copies par les hautes Montagnes,  
Devastant tout, et puis apres regner.  
One of the greatest shall run away into Spain,  
That shall cause a Wound to bleed long;  
Leading the Armies over the high Mountains,  
Destroying all, and afterwards shall reign.

Annotations.

This is so plain, that it needeth no Interpretation.

For an Explanation of my Hieroglyphick, I shall refer my Readers to the 12th Chap. of the Revelations of St. John, wherein they may find ample Satisfaction; and so in

Vesportine; the  $\Delta$  accompanied with cor.  $\Upsilon$ , a fixed Star of great Influence, from whence it may be rationally concluded, that the great Actions of Europe intended from hence, will be executed or managed by jovial Persons, viz. Under the third Quadrangle, where the Effects will be most apparent, we do assign  $\pi$  and  $\lambda$ . under  $\pi$  is Brabant, Flanders, Lombardy. Cities under  $\pi$  are London,

This is so plain, that it needeth no Interpretation.

For an Explanation of my Hieroglyphick, I shall refer my Readers to the 12th Chap. of the Revelations of St. John, wherein they may find ample Satisfaction; and so in

the next Place I shall give you an Account of the Celestial Bodies, how they are disposed in the Year 1779, and what they may probably signify unto the lower World; and because the most Part of the Winter Quarter falls after the Date of new Almanacks, I begin with it first.

Now the Winter Quarter enters at such Time as the Sun touches the first Scruple of *Capricorn*, which happens on Monday the 21st of December, at 12 Min. past four in the Afternoon, at which Time the beginning of *Pisces* culminates, and 5 Deg. of *Cancer* ascends; the Moon defluxes from the Conjunction of *Venus*, and Trine of *Jupiter*, and applies to the Trine of *Mars*; the Sun has lately been in square with *Jupiter*, and *Mercury* hastens to the square of *Mars*, and many other Configurations of the Planets during

this Winter Quarter, which may have very significant Effects, for many and signal are the Aspects of this Month December; as also in the subsequent Months of January and February, even to the Sun's Entrance into *Aries*: Hence I may conclude, that this Quarter will be attended with very considerable Councils and Consultations, such, which perhaps, were not expected, and as little desired by many Persons in our Nation; but, doubtless, to the great Satisfaction of honest Hearts, if not to the major Part of our Kingdom in general.—*Tempora mutantur*, &c. may very well be applyed at this Time; but, without all doubt, we may upon good Grounds conjecture that the Actions and Designs now on foot, both in our Nation, and diverse other Parts of the World (depending upon other very significant Influencies) will be very great and eminent, carried on with much Celerity, and no less Prudence, by the most active, wise, and great Senators of the Microcosme: Time will produce and manifest unto us the Particulars, and I predict, and really wish our Nation may still flourish, and appear not only the Admiration, but formidable to all the Princes and Potentates of Europe, and the other Parts of the World in general; and these things may be more apparent towards the midst or end of this Quarter than the beginning. Various Intelligence arrives from several Parts of Europe, of very notable Projects now carried on, which may be thought, by good Wits, to be almost prodigious. — The Diseases incident to this Quarter, are the Stone, Gravel in Kidneys and Bladder, Maladies in the Private Parts, with the Piles, or Hæmorrhoids, many by the Infirmities of the Lungs, and their Inflammations, Apoplexies, Quinzies, Tertian and Quotidian Agues, Jaundies, both yellow and black, Frenzies, Madnes, running Gout, &c. which brings me to the Consideration of the Spring Quarter;

Which this Year takes beginning on Saturday, March the 20th, near Sun set, by my Tables, or more precisely at 54 Min. past five in the Afternoon, at which Time we have about 29 Deg. of *Gemini* culminating, and near 29 Deg. of  $\Pi$  ascending; and the Moon hastning to the Square of *Venus*, and then to the Trine of *Jupiter*. In the Figure may be found the Trine of the Sun and *Mars*, the Trine of the Sun and *Saturn*, and the Opposition of  $\Upsilon$  and *Mercury*; but the most notable Aspect is the Conjunction of the two Infortunes in the fixed Sign  $\cap$ ; as you may more plainly see by the following Figure.

perated from their Trines in the 2d. At the second Congress, which is on the 1st of May, they are at the prevention Full Moon, in the third House, in Trine to ♀ in the 7th. At their third Meeting, which is on July the 26th, they are in the 2d House in \* to the ♃, and in Δ to the ☉: The first of these shews Blood and Destruction from armed Men, by plundering and fighting in those Countries, where Soldiers are quartered near the Frontiers; and that there will be much Mischief done as well to the Country People, as among the armed Men; by destroying their Goods and Cattle, and all Things that are to the Sustenance of Man and Beast; but the principal Effects of it, will be in fighting and quarreling, and such like. And this, as well in Cities, and Councils, as in the Army, or between the Enemies, and Parties on both Sides; and this principally in Russia, Polonia, and Sweedland, the North Part; and Norway and Bavaria, and some Parts of France. The second shews the Breach of some League, the disrespectful Usage of some Ambassador, &c. a Town or Fort in danger for want of Ammunition and due Supplies for Defence; and with these Hostilities and Violencies, as well among Societies as Soldiers; and this for the most Part of the Spring Quarter in divers Parts and Countries. The third shews a sickly Summer, Plots about Religion, Murders and Robberies, Heats, Contests, and Differences between the Parties, mighty Prentences to Piety by those that know nothing of the Matter.

There seems to be a new Ferment in the Spirits of Mankind, tending to Cruelty and Destruction of one another, as if the δ Πονηρὸς were let loose, not to tempt, but to possess Mankind with such a Temper as is fit for his Design. The Devil is a Master at his Trade, and all his Journeymen's Heads with stately Notions about Religion, but commonly there are very hot ones, like the Place they come from: Error is their first Principle, and Pride and Cruelty their height of Perfection; they commonly learn to be Wise by the Precepts and Example of their Master; but he forbids them to be acquainted with Charity, Humility, and Truth, and this on pain of Death.

It was well said by one, "Be careful not to exasperate any Sect of Religion, Rigor seldom makes ill Christians better, but many Times it makes profound Hypocrites. Zeal looks well in a private Breast, but Moderation is noble and great in a public State: Set Bounds to your Zeal by Discretion, to Error by Truth, to Passion by Reason; but to your Divisions by Charity, never contend over passionately

“ for Ceremonies (which are but the Suburbs or Shadow of Religion) to the Disquiet of the State and Church : It is better for the Church and People to be without some Truths, than to have Peace ” With which Christian and pious Advice I shall end my Judgment on this Spring Quarter.

The Summer Quarter begins when the Sun toucheth the first Part of *Cancer*, and that is this Year, by my Tables, on Monday the 21st of June, 3 Minutes past four in the Afternoon, at which Time  $\text{♊}$  with 12 Deg. of it ascends, and 28 Deg. of the *Lion* culminates : Now, four Planets are angular, the two Infortunes in the Ascendant,  $\text{♄}$  in the Medium *Cœli*, and *Venus* in the 7th, the  $\odot$  and  $\text{♁}$  in the 8th, and the  $\text{♂}$  in the 11th, going from the  $\square$  of  $\odot$ , and applying to the  $\square$  of  $\text{♁}$ , as I have delivered my Opinion very freely in the other Quarters, so I am obliged to be more concise in this. I shall only say that the Infortunes in Angles generally make Mischiefs in the World, they urge the Spleen and Gall to exorbitant Effluvia's, stir up angry and malicious Inclinations, moves Men to Wars, Duels, and Discords, prompts them to arbitrary and ardent Commotions, demolishing and depopulating Places, driving People from their Homes, and leading them into Captivity ; this may be verified in remote Parts, where Armies rage and ravage, and where the sharpest Arguments are unable to turn the edge of a sharp Sword. There are like to be many great Consultations, great Changes and Chances, a deal of proving and coning among all Sorts of People ; Death and Danger surrounds many, both high and low, rich and poor ; much News, both good and bad ; News-houses crowded with News-mongers ; many Embassies and Petitions for Redress of Grievances ; two famous Metropolitan Cities much concerned in the Actions, Transactions, and Accidents, signified by these Configurations. And so I proceed to the Autumn Quarter ;

Which begins at such Time as the Sun enters the first Point of  $\text{♋}$ , making the Days and Nights equal again, as when in *Aries*, which is according to my Calculations on September the 23d, 35 Minutes past Seven in the Morning, when 24 Deg. of  $\text{♋}$  culminates, and 25 Deg. of *Virgo* ascends : The most remarkable Aspects near to this Ingress, are a Conjunction of *Venus* and *Mercury*, a Square of *Mars* and *Mercury*, a Square of *Mars* and *Venus*, and a Conjunction of the  $\odot$  and *Jupiter* ; but having not room to expatiate upon them, I must desist till a further Opportunity.
